Status of Surimi Industry in the Southeast Asia

Siriporn Pangsorn, Penchan Laong-manee and Somboon Siriraksophon

SEAFDEC/Training Department/ Capture Fishery Technology Division/ P.O. Box97, Phrasamut-Chedi, Samutprakan 10290 THAILAND

I Introduction

Fish paste products have long been a part of traditional Asian cuisine, but surimi has become one of the most dynamic commodities in the Asian seafood industry because of recent innovations in production and utilization. Surimi is an intermediate product made from minced fish meat that has been washed, refined, and mixed with cryo-protectants. Although fish paste products have been hand-made for centuries, a process for frozen surimi, invented in 1960 provided the impetus for expanding the industry and surimi markets based on the vast walleye pollock, alaska pollock resources. The Asian surimi industry was under-going a period of rapid change as the Republic of Korea, Thailand, New Zealand, and the United States were increasingly challenging Japan's position as the world's leading surimi producer. The appreciation of the yen and the Japanese exclusion from U.S. and Soviet walleye or Alaska pollock resources, have caused Japanese production to decline from its 1984 peak of 418,000 MT to 310,000MT in 1989 and decreased to only 132,000MT in 1994. Meanwhile, the output of the other four major producing countries has increased from about 26,000MT to 260,000MT during the same period.

The Korean surimi industry shows the greatest potential for independent growth among the Asian surimi producers, with an output of 60,000MT in 1989. During this period, Thai industries also has showed considerable growth potential dependent upon the Japanese technical assistance. The success of the Thai surimi industry stimulated developments of surimi production in the Southeast Asian countries such as Malaysia, Myanmar, Vietnam, and Indonesia.

According to rapid growth of surimi industry in Southeast Asian countries, as well as depletion of fisheries resources especially demersal resources, reduction of raw materials may impact to the demand of surimi producers. Therefore under the Asian-SEAFDEC program SEAFDEC/TD proposed to conduct the information collection of economically important species as surimi raw materials in the Southeast Asian. The program was started from 2005 by collecting all information concerns in cooperation with the local fisheries agency and fishery private sectors. Field trip to observe and interview the surimi producers were also performed such as in Thailand, Indonesia, Vietnam and Myanmar. Information from Malaysia mostly based on the questionnaires in cooperation with DOF/Malaysia. In this study, the attempt is not only to show the quantity of surimi products in the region, but the linkage between surimi products and raw materials used in each country in comparison with the status of fisheries resources in the region will also analyzed.

II Current Status of Surimi Industry in the Southeast Asia

The surimi production in the Southeast Asian Countries namely Thailand, Malaysia, Vietnam, Myanmar and Indonesia is primarily based on the demersal species such as Threadfin bream (*Nemipterus* spp), Big eye (*Priacanthus* spp) and Lizardfish (*Saurida* spp), because they are the most abundant raw materials found in the region and because they also exhibits the proper characteristics for processing export-quality surimi. Only in Malaysia, Barracuda seem to be one of the main raw materials.

Overall surimi products in the Southeast Asian Region in 2005 are estimated 347,000MT. **Figure A1** shows the percentage of surimi products in Southeast Asian Countries in 2005. It is found that largest surimi producers in Thailand and follow with Malaysia and Vietnam where as the amount of surimi products are 150,000MT, 100,000MT and 84,000MT, respectively.

Figure A1: Percentage of surimi products in the Southeast Asian countries in 2005.

1) THAILAND:

> General Information

Thailand started surimi production in 1978 and has increased its production to 65,000 tonnes in 1994 and to also 150,000 tonnes in 2005. Currently there are 21 surimi processing plants in Thailand which operate occasionally throughout the year. Main raw material species used in the processing plants are based on the Threadfin bream (*Nemipterus* spp), Big eye (*Priacanthus* spp), lizardfish (*Saurida* spp), Croaker, Goatfish (*Upeneus* spp), Big eye snapper (*Lutjanus* spp), etc. There are also some small pelagic species such as Sardine (*Sardinella* spp) and Rainbow runner (*Elagatis bipinnulata*) used as raw materials. **Table 1** show the list of surimi processing plants located in Thailand and their capacity in 2005. **Figure 1.1** shows the distribution of surimi processing plants in Thailand. Six plants show high production capacity from 12,000 – 22,000 MT/year, while most of the plants produce surimi between 3,000-9,500 MT/year.

No.	Company name	Location	Capacity (MT/year)
1.	B. S. Manufacturing Co., Ltd.	Samut Prakan	3,000
2.	Premier Frozen Product Co., Ltd.	Samut Prakan	4,600
3.	Andaman Surimi Industries Co., Ltd.	Samutsakhon	16,500
4.	Anusorn Mahachai Surimi Co., Ltd.	Samutsakhon	7,500

21.	Chaicharoen Marine (2002) Co., Ltd.	Pattani	4,500

In late 1970s, the fish species used as raw materials in surimi industry, especially the Threadfin bream, Big eye were found abundant in Thai waters namely Gulf of Thailand and Andaman Sea. According to the Thai Government, in 1963 fishing effort for Threadfin bream yielded 276 kg/hour. In 1988, only 80 kg/hour and only 20kg/hour were caught in 2000. However due to rapid growth of surimi industry in Thailand as well as the depletion of demersal fisheries resources, therefore sources of fish are expanding to the neighbor countries such as Myanmar, Indonesia and Malaysia. **Table 2** shows the list of fish species used in surimi industry in Thailand.

Table 2: List of raw materials used for surimi products

No.	English name	Trade name	Scientific name	Local name
1.	Threadfin bream	Itoyori	Nemipterus spp.	ปลาทรายแดง
	Five lined threadfin bream	-	N. tambuloides	
	Rosy threadfin bream		N. peronii	
	Redspine threadfin bream		N. nemurus	
	Japanese threadfin bream		N. japonicus	
	Doublewhip threadfin bream		N. metatophorus	
	Slender threadfin bream		N. zysron	
2.	Lizard fish	Eso	Saurida spp.	ปลาปากคม ไล้กอ

11.	Snapper	Fuedai	Lutjanus sp.	ปลากะพงข้างเหลือง
	Bigeye snapper		Lutjanus lineolatus	
12.	Rainbow runner		Elagatis bipinnulata	ปลาสายรุ้ง
13.	Butterfly whiptail		Pentapodus setosus	ปลาสายรุ้ง, หัวโม่ง,
	[Nemipteridae]			ทรายแก้ว
14.	Barracuda			ปลาสาก
15.				ปลาดาบ
16.				ปลาเข็ม

The quantity of fish species raw materials supplied to the surimi industry in Thailand was 530,000 MT/year in 2005. **Table 3** shows the four main species namely Threadfin bream (*Nemipterus* spp), lizardfish (*Saurida* spp), Big eye (*Priacanthus* spp), and Croaker are common species used in the Thai surimi industry. Mostly 189,000 MT of Threadfin bream and 190,000MT of Lizard fish and Croaker were used in surimi products.

No.	Species	Quantity (MT/year)
1.	Threadfin bream [Itoyori]	188,459.9
2.	Lizard fish [Eso]	95,075.2
3.	Big eye [Kintokidai]	79,820.6
4.	Croaker [Guchi]	90,319.4
5.	Goat fish [Himeji]	38,505.3
6.	Pike conger [Hamo]	3,600.0
7.	Pony fish [Shirosaki]	9,984.0
8.	Sardine [Mamakari]	5,760.0
9.	Silver biddy	1,200.0
10.	Monocole bream [Duwo]	350.0
11.	Snapper [Fuedai]	8,200.0
12.	Others	329.0
13.	Not identified	8,500.0
	Total	530,103.4

> Surimi Production and Export

The surimi production based on data collection from processing plants during 2002-5 shows that, the production increased from its 2002 of 119,000 MT to about 143,000MT in 2005. This information collected from 18 plants is appeared in the **Table 4**. About 70% of the total frozen surimi productions were exported to Japan, Singapore, Taiwan, Korea, Malaysia, Hong Kong, Europe, China, Canada and USA in 2005. And another 30% was used in the Surimi-base production in the country. **Table 5** shows the trend of export of the frozen surimi production during 2002 to 2005.

Sources of Raw Materials : from the Southeast Asia Countries, (see Figure 1.2)

Figure 1.2: Sources of raw materials from Southeast Asia countries to Surimi industry in Thailand.

Constraints/Issues

- Un-stable and un-predicable of raw material supply cause a shortage of raw material [especially in summer], Almost of raw material were imported from Indonesia (the company planning to move to Indonesia but face problem with the location still lack of basic requirement for establish factory such as electricity and water supply and also safety matter)
- The increasing of production cost which came from price increasing of; Raw material (fish and other ingredient such as sugar, surbital, polyphosphate, and etc.), Fuel, Electricity, Water supply, Labor cost, Transportation, Equipment and Minimum wages.
- Raw material quality unstable cause by improper handle from supplier [onboard and supplier station]
- Hygienic of fishing port
- Too many surimi producer companies (this situation had been happen before, seen as a cycle and finally only company that have enough financial support can survive)
- High competition from low price surimi producer country such as India, Vietnam and Malaysia (From Mr. Witit opinion, the boom of surimi industry in India will be finish soon because of the un-continuous of raw material supply)
- Raw material price is high but surimi price is low so cannot competition with other surimi producer country
- No cooperation among surimi producers to standardize price, price was control by buyers (Almost importer)
- Shortage and high cost of labor
- Limitation of cold storage
- Unstable of product order
- The product quality control is stricter due to an agreement of GMP, HACCP, EU and ISO
- Shortage of water supply in some provinces especially in the Southern Part of Thailand (Trang province)
- Unstable of Thai vs USD currency

2) VIETNAM

> General Information

Refer to National Fisheries Quality Assurance and Veterinary Directorate (NAFIQAVED) information shows that the Vietnamese frozen sirimi production from 17 processing plants in 2005 was about 83,495MT. The production was increased from 16,502MT in 2003 (VASEP, 2003) to 83,495MT in 2005. **Table 6** shows the List of medium and large processing plants producing the frozen surimi products in Vietnam. **Figure 2** shows the location of the processing plants in Vietnam. Almost half of all processing plants have capacity less than 2,000 MT/year. Seven processing plants have the production capacity between 2000-5000MT/year. The rest of five processing plants have the production capacity between 5,000-17,000 MT.

Raw material fish species used for surimi productions in Vietnam come from their EEZ waters especially in the Ton kin Gulf and the Southern part of Vietnam such as Cat Ba Island, Hai Phong and Bach Long Island, Hai Phong, Da Nang, Kian Giang, Kan Hoa, Ca Mau, Vung Tau, Kien Giang, Tien Giang and Binh Thuan. **Table 7** shows the list of fish species used in the processing plants for surimi production.

From the field survey to five processing plants which shared about 50% of the total frozen surimi production found that there are five main fish species namely King snapper (*Pritipomoides filamentosus*), Lizard fish, Big eye, White croaker and others. **Figure 3** shows the percentage of the main five species groups used for surimi product in the processing plants.

No.	Company name	Average production
		(MT/year)
1.	Viet Truong Co., Ltd.	3,000.0*
2.	Danifoods: D&N Foods Processing Co., Ltd.	3,150.0*

	Doggertooth pike conger		M. cinereus
7.	Barracuda, Japanese Whiting	Kamasu	Sphyraena spp.
8.	Sea Tilapia [Family Haemulidae]		Plectorhinchus lessonii
9.	Flathead bartail		

Table 7: List of raw materials used for surimi products in Vietnam

Figure 3: Percentage of raw materials for Surimi Production based on 5 processing plants in total quantity of 115,035 MT.

Export information

Almost 90% of the total frozen surimi production was exported to many countries. The main importers are Korea and Japan which imported 69.5% and 28.2% of the total production, respectively. The others importer were Singapore, Thailand, Malaysia, China, Taiwan, USA, EU, Australia, New Zealand, Russia and Mexico.

Constraints/Issues

- Shortage of raw material supply because of
 - ✓ Supply not stable depend on weather
 - ✓ Too many surimi producer companies and all company use the same species as raw material
- Discontinuous supply of raw material
- Quality of raw material is not so good because of long distance of transportation and fish handling method onboard. Some company had negotiated with fishermen to preserve raw material. If good quality, fishermen can sell in higher price.
- ✤ A few customers because just start this business in May 2006

3) MYANMAR

Myanmar people have a long tradition of producing fish paste, fish sauce, dried fish, salted fish and pickled fish, fish crackers. Shrimp heads, very small fish and even mollusk shells are used for animal feed. The fish products from some areas have been studied but catch data do not cover the whole country. Better Utilization of by catch depends mainly on technology progress and capital required for processing. In Myanmar there is one surimi plant in Yangon. It was established in 1994-95 to produce surimi from bycatch. Bycatch fish such as lizard fish, small barracuda, black spot threadfin, goat fish, small sea-bass, threadfin bream and big head pennah croaker are used. The fish is first manually headed and gutted and then passed through a meat-bone separator to remove the flesh meat.

At present there are five processing plants produce surimi production and one is under construction. **Table 8** shows the list of processing plants which are located in only two main Division namely Yangon and Tanintharyi Divisions. The capacity of surimi production in **Figure 4** shows the location of all surimi processing plants in Myanmar.

No.	Company name	Location	Capacity
1.	Pyilonechantha Trading Co., Ltd. (since 1994)	Industrial Zone (3) , Shwe Pyi Tha Township, Yangon Division	7-8 MT/day [Max. 10 MT/day] 180-200 MT/month*
2.	A.S.K. Andaman Limited (since 2005)	Myeik Industries Zone, Myeik Township, Tanintharyi Division	5 MT/day [Max. 10 MT/day] 15-20 MT/day*
3.	Pyi Phyo Tun International Company Limited (PPT)	Strand Road, Thalaisu Quarter, Myeik Township, Tanintharyi Division	[Max. 20 MT/day]
4.	Min Zar Ni Co., Ltd. (since 2003)	Industrial Zone (1), Hlaing Thar Yar Township, Yangon Division	30 MT/month*
5.	Pearl Sea Co., Ltd. (since 2003)	Hlaing Thar Yar Industrial Zone (4), Yangon Division	80-85 MT/month*
6.	General light Co., Ltd. (since 2001)	Hlaing Township, Yangon Division	19 MT/month*

Table 8: List of surimi processing plants and its capacity in Myanmar

Figure 4: Location of surimi processing plants in Myanmar.

Fish species used in the surimi processing plants is shown in **Table 9**. All raw material fish species come from the Myanmar waters namely in Rakhine, Ayeyawaddy, Mon, and Tanintharyi Fishing ground. The quantity of raw materials used for surimi production from four processing plants as shown in **Table 10** was about 11,500 MT/year. From this total amount, the Threadfin bream shared almost 50% of all raw material fish species (see **Figure 5**).

No.	English name	Trade name	Scientific name
1.	Threadfin bream	Itoyori	Nemipterus spp.
2.	Lizard fish	Eso	Saurida spp.
3.	Big eye	Kintoki-dai	Priacanthus spp.
4.	Croaker, Big eye croaker, White croaker	Guchi	Pennahia spp.
			Johnius spp.
5.	Goatfish	Himeji	Upenneus spp.
6.	Barracuda, Japanese whiting	Kamasu	Sphyraena spp.
7.	Big eye ilisha		Ilisha megaloptera

No.	Company name	Quantity (MT/year)
1.	Pyilonechantha Trading Co., Ltd.	5,687.8
2.	A.S.K. Andaman Limited	4,368.0
3.	Min Zar Ni Co., Ltd.	828.3
4.	General light Co., Ltd.	570.0
	Total	11,454.1

Figure 5: Quantity and percentage of raw material fish species used in Surimi production in 2005.

> Export information

In the year between 2004-2005 Myanmar exported a total of 4230MT to many countries, the main importer was Japan. 80% of total surimi production exported to Japan, while 18% to China and another 2% to Australia, Singapore, Taiwan, and Malaysia.

Constraints/Issues

Raw material supply to industries

4) INDONESIA

> General Information

Indonesia is the largest country in the Southeast Asian Region and also largest shelf area (to 200m) about 2,700,000 Sq. km and EEZ area 2.7 million Sq. km. Many fishery resources can be used as raw materials for surimi processing. At present there are only 8 processing plants and mainly located in Java mainland. **Table 11** shows list of processing plants and their production capacity in MT/year. **Figure 6** shows the location of surimi processing plants in Indonesia. In 2005 the total surimi production was estimated less than 8,000 MT.

No.	Company name	Location	Capacity (MT/Year)
1.	PT. Pulau Mas Moro Mulia	Kepulauan Riau	1,000
2.	PT. Sumber Laut Utama	Jambi	1,000
3.	PT. Muara Manggalindo	Jakarta	2,700

Table 11: List of surimi processing plants and its capacity

Figure 6: Location of Surimi processing plants in Indonesia.

Raw materials such as Threadfin bream, Big eye, Croaker, Goat fish and others mostly come from Java sea, sea around Riau and Jambi province in western Kalimantan. **Table 12** shows the list of raw materials used in Indonesia processing plants. **Figure 7.1** shows the percentage of raw materials used in Indonesia.

No.	English name	Trade name	Scientific name	Indonesian local name
1.	Threadfin bream	Itoyori	Nemipterus spp.	Kurisi
2.	Lizard fish	Eso	Saurida spp.	Bluso, Ikan Pisang-pisang
3.	Big eye	Kinmedai Kintoki-dai	Priacanthus spp.	Ikan Merah, Mata Goyang
4.	White croaker	Guchi		Ikan Gulamah, Tigawaja
5.	Goatfish	Himeji		Kuniran, Ikan Biji Nangka
6.	Shad			Ikan Beliak Mata
7.	Singapore silver biddy		Gerres kapas	Kapasan
8.	Glass fish	Kurosagi		

Table 12: List of raw materials used for surimi products in Indonesia

> Export Information

Quantity of frozen surimi production from 6 processing plants as appeared in **Table 13** show that it was about 5,110 MT export to the Asian Countries such as Korea, Japan, Singapore, Taiwan and Hong Kong only.

Sources of Raw Materials : (see Figure 7.2)

Table 13: Export data during 2003-2005 in Indonesia

> Constraints/Issues

- Raw material decrease, Shortage of raw material
- ✤ Freshness of raw material
- Raw material depend on landing site
- Raw material competition with the local market
- ✤ Oil crisis, policy in 2006 difficult to support fisher
- Long time of fishing operation 1 month/trip

5) MALAYSIA

General Information

Based on the Fishery agriculture Marketing Agency (FAMA), there are three types of producers of Surimi and Surimi-based products by State namely surimi, otoshimi and surimi-based products. Only 6 were recorded as surimi producers. **Table 14** shows four processing plants and their quantity products from 2001-2006. It is found that QL Foods Sdn. Bhd. Is the largest surimi producers located in Perak State. The quantity of surimi products were averaged 82,000MT per year. While another processing plants were produced around 3,000-4,500MT/year only. Overall production of surimi products in 2005 was around 100,000MT for six main surimi processing plants.

		Surimi production quantity (MT/year)					
No.	Company name	2001	2002	2003	2004	2005	2006
1.	QL Foods Sdn. Bhd.	84,000	80,000	70,000	80,000	84,000	82,000
2.	QL Marine Products Sdn. Bhd.			3,600	3,000	3,800	4,000
3.	Global Ocean Frozen Food Sdn. Bhd.			3,600	3,000	2,500	3,200
4.	Ocean Fresh Seafood Products Sdn. Bhd.		5,400	5,000	4,800	5,000	4,500
	Total	84,000	85,400	82,200	90,800	95,300	93,700

Table 14: List of main surimi processing plants and their annual products during 2001 to 2006

Raw materials used in surimi products were shown in **Table 15**. It was almost 670,000 MT of raw materials supplied into surimi processing plants in Malaysia. Not only main species such as Threadfin bream, Lizard fish, Big eye, Croaker and Goat fish but the Barracuda is also the mian species used in Maylaysia. **Figure 8** show the percentage of raw materials by species used in surimi processing plants in Malaysia. Most raw materials are from the EEZ of Malaysian waters such as in Malacca Strait, East coast of Peninsular Malaysia, Sarawak and Sabah waters.

> Export Information

Surimi products from Malaysia are used in local surimi-based products processing plants and also export to many countries. For export, main importers are USA and Chile shared about 65%, 16% and 10% to Japan and Singapore respectively.

No.	English name	Trade name	Scientific name
1.	Threadfin bream	Itoyori	Nemipterus spp.
2.	Lizard fish	Eso	Saurida spp.
3.	Big eye , Ox-eye scad	Kintoki-dai	Priacanthus spp.
4.	Croaker, Jewfish	Guchi	Pennahia spp. Johnius spp.
5.	Goatfish	Himeji	Parupeneus pleurospilus Upenneus spp.
6.	Barracuda		Sphyraena spp.
7.	Ribbon fish		Trichiurus spp.

Table 15: List of Raw materials used for surimi products in Malaysia

Figure 8: Percentage of raw materials used in Surimi processing plants in Malaysia.

Constraints/Issues

- ✤ Insufficient raw material
- High production cost due to increase in raw material, increase in ingredient cost, fuel (due to transportation), and increase in transportation charges from customer.
- Low oversea market price in Korea & Singapore
- Insufficient single species fish for making high quality Surimi. Have to use as many as 20 kinds of fish to make Mixed grade Surimi but price of mixed grade is cheap. And get additional supply from Tunjung Manis deepseas operators but supply is also not enough and cost is high due to extra freight.

III Acknowledges

The project leader and all authors are very appreciated to the Government of Japan through the Fishery Agency Trust Fund for financial support of implementing the project. We also high appreciate to all countries and concerned SEAFDEC/Department focal points namely: Dr. Wudianto senior researcher of Research Center for Capture Fishery of Indonesia; Mr. Ahmad Adnan bin Nuruddin, senior officer of Fisheries Research Institute, Department of Fisheries of Mayalsia, Mr. Min Naung, Deputy Divisional Fisheries Officer from Department of Fisheries, Avevarwaddy Division Pathein Township, Myanmar; Mr. Noel C. Barut, Officer-in-Charge of the National Fisheries Research and Development Institute of the Philippines; Ms. **Praulai Nootmorn**, Director of the Andaman Sea Fisheries Research and Development Center, DOF-Thailand; Ms. Passarapa Kaewnern, Food Technologist of Fish Inspection and Quantity Control Division, Department of Fisheries/ Thailand. Dr. Dao Manh Son, Deputy Director of Research Institute of Marine Fisheries/ Vietnam; Mr. Yeap Soon Eong, Head of Fish Processing Technology Branch, Marine Fisheries Research Department (MFRD); Mr. Ibrahim Johari, Researcher of Marine Fishery Resources Development and Management Department (MFRDMD) who joined the 1st expert consultation in 2005 and supported in data collection. Thanks you to all processing plants which allowed our survey teams visit to the plants and provided us basic information related to surimi production and its market. The authors wishes this paper will be useful and provide views of surimi industry in the Southeast Asia region to those who interested.
